

SOIL CYCLE

In typical Workplace Spotlights, Missoula In Motion focuses on employers that encourage sustainable commuting to and from work. But for this Workplace Spotlight, the very mission of the featured business revolves around sustainable transportation. Soil Cycle is a compost collection service that relies on human powered transportation. They offer residential, commercial and workplace collection services where staff and volunteers pick up and transport compost back to their treatment facility all by bike.

To support employee sustainable travel, they offer bicycle gear and trailers for safe and responsible cycling. We also have bicycle pumps, bicycle parking, and other tools available for all staff and volunteers. In the winter, they even buy all their cyclists studded tires and bar mitts so they are warm and safe while biking to and from work, as well as during the work day.

Soil Cycle's Executive Director (and former Bicycle Ambassador for the City).
